

MOS Operation Manual

MOS management is made up of device management, activate data package, product management, order management, message management, log management and settings of seven functional modules. The following is a step-by-step explanation of the operation procedures and precautions of specific functions from seven modules.

March 12, 2019	1

Part 1 Device Management:

Query of device information, including inventory, management of device deactivation/activation and order status

Operation: Click device management to unfold or fold sub-menu.

1.1 Inventory Management

1) Display: Display device inventory by "Product Name" "Product Type" "System Entry Time" "Total Number of Devices" "Retail or Rental Type"

2) Logic: The device automatically enters the customer's MOS management system after being allocated by Ulink. Administrators can classify devices as "rental" or "retail" based on business needs for tracking records in device operation.

1.2 Operate Device

1) Display: Display the operational status of all devices by IMEI, SSID, KEY, Product ID, Batch Serial No, Lock screen advertising, Model, activated Time, device type, Belongs To, Bundled account and Operation (deactivate/activate or Allocate devices to channel partners).

2) Logic: All devices are displayed by default. The activation time of the device is recorded when the device is activated (The initial device is activated for the first time when data package is placed). Management of device deactivation/activation : After the device is deactivated, the device package will not be available, and the WIFI network will not be connected; After the package is active, the WIFI network will be restored.

5) [Allocate]: Click on [Allocate], tooltip pops-up. Select the channel partner you want to allocate this device for.

1.3 Shipping out with Batch

- 1) Logic: Aiming to make batch devices allocated for channel partners more efficiently.
- 2) Click [Shipping Out with Batch] to enter the page.
- 3) Select Attributed Channels and Input Unit Prices for Settlement

The screenshot shows the 'Batch Transfer' form. It has three steps: 1. Attribution Information, 2. UploadExcel, and 3. Confirmation Message. Step 1 is active. The form contains fields for 'Attributed Channels' (Ulink1) and 'Unit Price for Settlement' (USD | 115). There are 'Previous Step' and 'Next Step' buttons.

- 4) Download "Excel Template" for inputting all device IMEIs that needed for allocated for channel partners.

The screenshot shows the 'Batch Transfer' form with step 2, 'UploadExcel', active. It features a 'Drag or Click to Upload' area with an upload icon. A red arrow points from the 'Download Excel Template' link to the 'Upload Excel' area. To the left, a table lists IMEIs.

Part 3. Package Activation

- 1) Logic: Customer directly selects data package and activates it for the device through MOS system. After the device rebooted, the Macaroon WIFI network can be used normally.
- 2) Operation: Input IMEI to query the device to be activated, check the device to open the package. (removing the check box in front of the device or clicking the [Delete] button can delete the selected device.) Multiple devices can be selected at the same time. In order to ensure the smoothness of the operation, it is recommended to open no more than 20 devices each time.

Part 6. Advertisement Management

This new function is only available to specific versions.

6.1 Click the menu as follows:

- 1) Advertisement
- 2) Lock screen advertisement
- 3) New Lock Screen Advertisement

6.2 Fill in the Ad information as requests

1) rules: One advertisement can add multiple advertisement photos. At the same time, there can only be one advertisement (single or multiple advertisement photos) on one device. New ads will replace the old ones in chronological order.

2) Field description when you fill in:

Name:

Rotation time:

PNG Advertisement Image(Force240*160):

Time setting: ☒ On-shelf immediately ☐ On-shelf regularly

ChooseIMEI:

A. Name: You can put the name whatever you want.

B. Rotation time: This is the duration the Ads show on the screen. The unit is “ms” 【1s=1000ms】. And the duration value must be longer than 80ms.

C. PNG Advertisement Image(240*160):

Image file is uploaded locally;

file format: png;

image size: 240x160px;

url: address link for Ad jump (**Not mandatorily required**)

sort out: Display of each Ad image on macaroon devcie when multiple Ad images are displayed. (Note: When adding more Ad images, please click "Add") Eg. You can input 0,1,2,3...

D. Time setting: You can choose “On-shelf immediately”(means the Ad will show immediately once you set)”or “On-shelf regularly” (means you can choose the time you want to show)

E. Choose IMEI: You can choose IMEI no. of the macaroon devices which you want to set the Ad. (You can choose one or more devices one time.)

F. Preview

G. Submit

3) After you set one Ad, you can find it here. And you can “Edit” it if you want to change something, then the old one is

replaced.
